

## AMENDMENTS TO THE CLAIMS

1 - 42. (Cancelled).

43. (New) An apparatus for illuminating an interior of a building including a roof having a hole formed therethrough, said apparatus comprising:

a roof tile adapted to be supported on a roof of a building, said roof tile including an upper surface having a shape and defining a plane;

a panel connected to said roof tile, said panel including an opaque tile having an opening formed therethrough and a light transmissive element that extends across said opening, said opaque tile having an upper surface that is substantially identical in shape to said shape of said upper surface of said roof tile and lying in said plane defined by said roof tile; and

a light directing duct supported on said panel and adapted to extend through a hole on the roof of the building for directing light from said light transmissive element of said panel to an interior of a building.

44. (New) The apparatus defined in Claim 43 further including a light transmissive cover that is supported on said light directing duct.

45. (New) The apparatus defined in Claim 44 wherein said panel further includes a housing having a first end that is supported on said opaque tile and a second end that supports said light transmitting duct.

46. (New) The apparatus defined in Claim 45 wherein said first end of said housing has a flange that is received within a recess formed in said opaque tile.

47. (New) The apparatus defined in Claim 45 wherein said light transmissive element is supported on said first end of said housing.

48. (New) The apparatus defined in Claim 47 further including a light transmissive cover that is supported on said light directing duct.

49. (New) The apparatus defined in Claim 45 further including a plurality of vent holes formed through said housing.

50. (New) The apparatus defined in Claim 43 wherein said upper surface of said light transmissive panel is flush with said plane defined by said roof tile.
